Glimpses Of Mobile APP

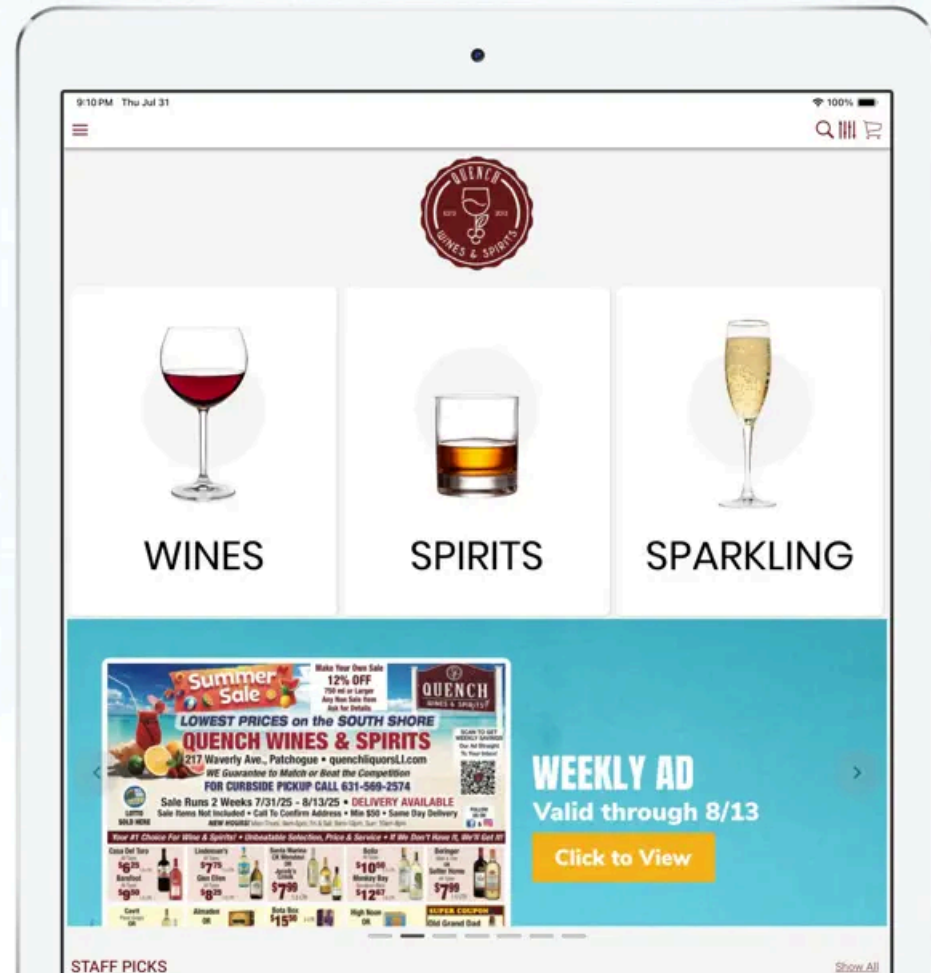

The image displays four screenshots of the Mind The Sip mobile application, each within a light orange frame. The first screen, 'Plan your drinks', shows a form with sections for 'Where?' (Home, Out, Home + Out), 'Drink' (Beer, Wine, Shot), 'Type' (Red, White), and 'Size' (Bottle, Glass). The second screen, 'Drill down on the details', shows a bar chart for 'Alcoholic Drinks' for the week of 1-8 August 2022, comparing 'Past consumption' (16 drinks) with 'Recommended consumption' (5 drinks). The third screen, 'Tap into resources', shows a list of podcasts including 'The Mel Robbins Podcast', 'Not Drinking Today', 'Mind The Sip Founder', 'Still Not Drunk with Aidan Jones', and 'Under The Gloss with Phoebe Burgess'. The fourth screen, 'Stay accountable', shows a chat interface with a message from 'mts' asking 'MTS here checking in to see how you're tracking with your planned drinks?' and response options 'Great', 'Okay', and 'Not great'.

Mind The Sip is an alcohol reduction app designed by a Certified Recovery Coach to help users cut back, drink mindfully, and build healthier habits. It offers daily accountability, alcohol-free streak tracking, and clear insights into drinks consumed, money saved, and calories avoided. With a powerful calendar, mood journaling, and real-time support, the app helps users plan, monitor, and celebrate progress. Members also gain access to curated resources, exclusive discounts on alcohol-free products, and a safe private community. Whether your goal is moderation or going alcohol-free, Mind The Sip provides the tools, guidance, and support to make lasting change.

Quench Liquors is a modern liquor store app experience, designed to provide customers with seamless access to an extensive selection of wines and spirits. The app supports quick in-store pickup and convenient delivery, with features like curated staff picks, on-sale highlights, and new arrivals. Users can explore products, track specials via SMS updates, and enjoy a smooth, intuitive shopping interface. With mobile-first design and integrated ordering, Quench Liquors connects community convenience with digital innovation.

NETME is a social networking app designed to bridge the gap between online connections and real-world meetups. Users can discover like-minded people nearby, select ideal meeting spots, and send instant invitations. The app makes arranging casual meetups effortless, while also offering the option to book places for dates and share the best nearby spots instantly. By fostering authentic, face-to-face interactions in a fast-paced digital era, NETME helps users turn connections into real experiences. With its clean interface and intuitive flow, NETME delivers a seamless experience for anyone seeking genuine connections.

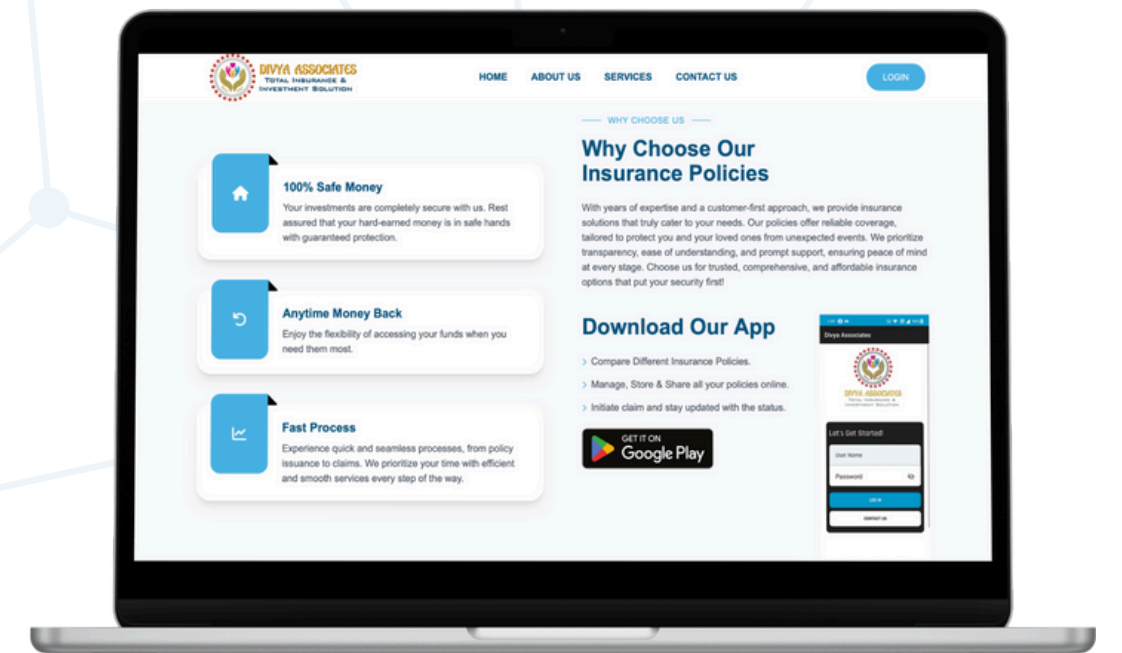

Glimpses On Enterprise Work

Mobile-based e-paper display project for medication tracking. This system leverages e-paper technology to provide a low-energy, clear, and highly readable display for medication schedules and instructions, ensuring better adherence and improved patient care. Beyond medication reminders, the solution also supports real-time updates from healthcare providers, reducing errors and enhancing communication between patients, caregivers, and doctors. e-paper display, offering users a simple, reliable, and efficient way to manage prescriptions, monitor medical routines, and receive timely alerts. With its intuitive interface and focus on usability, the platform helps patients stay on track, improves treatment outcomes, and reduces the risk of missed doses or medication misuse. Additionally, the system allows patients to directly order medicines from partnered pharmacies, ensuring quick access to essential drugs and refills. This integration not only saves time but also provides a convenient, end-to-end solution—from prescription tracking and reminders to doorstep delivery of medications.

How It Started,

Axiomverse has consistently been at the forefront of delivering innovative, tailored solutions designed to meet the ever-evolving needs of our clients across various industries. Our commitment to excellence is reflected in our methodical approach, which is grounded in collaboration, transparency, and adaptability at every stage of the project. We believe in not just meeting client expectations but consistently exceeding them by focusing on delivering high-quality results within set timeframes.

The cornerstone of our success lies in our agile and transparent approach to problem-solving. We prioritize maintaining open channels of communication throughout the entire project lifecycle, keeping our clients informed and involved every step of the way. This commitment ensures we can be flexible and adapt as requirements evolve, allowing for continuous optimization of our solutions.

Ultimately, Axiomverse stands as a symbol of reliability, innovation, and customer-centric solutions. We are driven by a passion for problem-solving, a commitment to integrity, and a focus on delivering tangible, impactful results for all of our clients. Through our unique approach, we continue to build long-lasting relationships with our clients, ensuring that they not only achieve their immediate objectives but are also well-positioned for future growth and success.

From Vision To Execution.

At Axiomverse, our process is designed to ensure a seamless transition from vision to execution, prioritizing collaboration, transparency, and quality at every stage. We begin with an in-depth consultation with the client to fully understand their needs, goals, and technical requirements. This foundational step allows us to gain clarity on the project's scope and expectations. Based on these insights, we craft a customized proposal that outlines a detailed solution design, project scope, timeline, and budget, ensuring that all stakeholders are aligned before moving forward.

Once the proposal is approved, we move into the planning and resource allocation phase, where we assign the right team members with the appropriate expertise. We then set clear milestones and deliverables to ensure smooth progress. Our design and development process involves creating prototypes, building the solution, and performing continuous testing to ensure functionality and quality throughout. Regular check-ins with the client ensure that the project remains on track and aligns with their expectations, allowing us to make any necessary adjustments along the way.

Upon completing the design and development, we conduct thorough quality assurance and final testing to guarantee a flawless, high-performing solution. Once everything is thoroughly vetted, we deploy the solution and provide comprehensive training and support to ensure a smooth transition. After launch, our commitment doesn't end—we offer ongoing maintenance and support to resolve any emerging issues and continuously refine processes based on client feedback, helping us improve and adapt for future projects.

Our Workforce

Mobile Development

Expertise: Native & Cross-Platform Mobile Apps (iOS & Android)

Technologies: Swift, SwiftUI, Objective-C, Kotlin, React Native, Flutter

Key Strengths: High-performance apps, seamless user experiences, integration with back-end systems.

Backend Development

Expertise: Robust, scalable server-side solutions

Technologies: PHP, JAVA, NodeJS, Docker, AWS S3, ASP.Net

Key Strengths: Database design, API development, cloud integration (AWS, Azure, Google Cloud).

Web Development

Expertise: Responsive websites, CMS development, eCommerce platforms

Technologies: React JS, AngularJS, CSS, Bootstrap, TypeScript, VueJS

Key Strengths: Aesthetically pleasing, mobile-optimized web designs, and conversion-driven websites.

UI/UX Design

Expertise: User-centered design, wireframing, prototyping, and user testing.

Tools: Figma, Sketch, Adobe XD, illustrator

Key Strengths: Designing intuitive interfaces, ensuring a smooth and delightful user experience across platforms.

AI & ML Development

Expertise: Machine Learning, Artificial Intelligence, Data Analytics

Tech and Methodology: Panda, Keras, Python, Scikit-learn, OpenCV, TensorFlow

Key Strengths: Predictive modeling, Natural Language Processing (NLP), Computer Vision, and Data Science solutions.

Steps Taken Thus Far,

In the realm of AI and machine learning, a customized chat agent was developed to enhance user interactions, offering personalized and intelligent responses based on user behavior and context. Furthermore, the company has implemented a paper kiosk system for retail shops, allowing customers to place orders and browse products via an intuitive iOS mobile application. This system streamlines the shopping experience, reducing wait times and improving customer satisfaction.

Additionally, the company has created several applications in emerging technologies, including Apple VR applications designed to offer immersive user experiences. These VR applications provide interactive, engaging environments for various use cases, from education to entertainment.

With Brother printer app, users can easily locate nearby printers, establish connections using manual settings, and effortlessly print PDF and image files directly from their mobile devices. The BLE Scanner app empowers users to scan barcodes using barcode reader hardware. It seamlessly communicates with the paired device to transfer the scanned output effectively.

These projects reflect the company's expertise in mobile development, emerging technologies like VR and AI, and its commitment to creating cutting-edge solutions that improve user experience and operational efficiency across diverse industries.
